(54) Title: METHOD AND SYSTEM FOR CAPTURING AND MONITORING A PHYSIOLOGICAL PARAMETER AND MOVEMENT WITHIN AN AREA OF AT LEAST ONE PERSON

(57) Abstract: A method for capturing and monitoring at least one physiological parameter and movement within an area of at least one person are disclosed. The area is divided into cells having respective location identifiers. Each person is provided with a respective device for measuring at least one physiological parameter of the person. The physiological parameter is indicative of whether the person has a physical condition. Each device has a device identifier. The device is used to at least intermittently measure a physiological parameter of the person using the respective device to obtain a physiological parameter reading for each measurement. The physiological parameter reading is associated with the respective device identifier of the device by which, the respective location identifier of the cell in which, and a time at which the physiological parameter reading is obtained. The associated information is stored at a remote location. A system and a physiological parameter device are also disclosed.
